RE RE

read & react

SUMMARY:

- Our problem statement is **Agentic AI Email Triage and Automated Action WorkFlow.**
- So we have used HTML , CSS and Java Script for the web development . We created an AI application named **RE RE (READ & REACT).**
- This AI actually directs user to know which sort of mail is this like Important,Spam,or Draft mail etc,.
- This AI mail is assisted with **voice assistant with specific voice commands** , And it identifies the important mails and it reminds the user about the meeting's with date and time in the calendar through instant notification , user can able to change the background colour of the inbox with specified colours.

- In the inbox you may able to find the mails in different colours (ex):**Important mails will be recoganized in YELLOW,**

  Mails in which the user have meeting schedule will be recoganized in BLUE.

  Spam mails will be recoganized in RED.

  Deadline mails will be recoganized in ORANGE.

Q4 Budget Review — Action Required

Sarah Chen <sarah@company.com> 9:41 AM

Hi James,

I wanted to follow up on the Q4 budget review we discussed last week. The finance team needs your final sign-off by end of day Friday.

Could we schedule a quick 30-min sync to align before the deadline?

Best,
Sarah
